

Install github desktop:

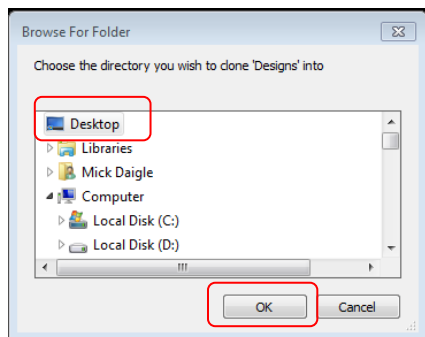

<https://desktop.github.com/>

login to username: NorthernForce172 Password:falgor172

- select the upper right corner +
- then NorthernForce
- select CLONE button at top
- select Designs
- select Clone Designs (at bottom)

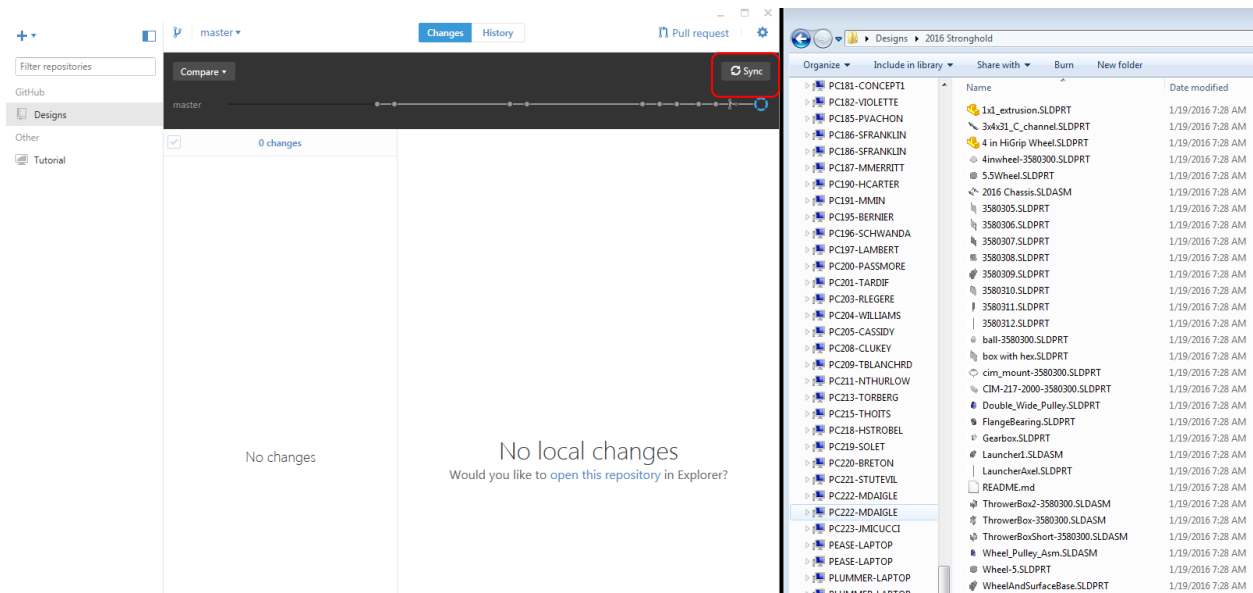

Select a folder location to sync with “on Lanco PCs select desktop so it can be found later and removed

You should now have a folder in your selected location of the Designs files.

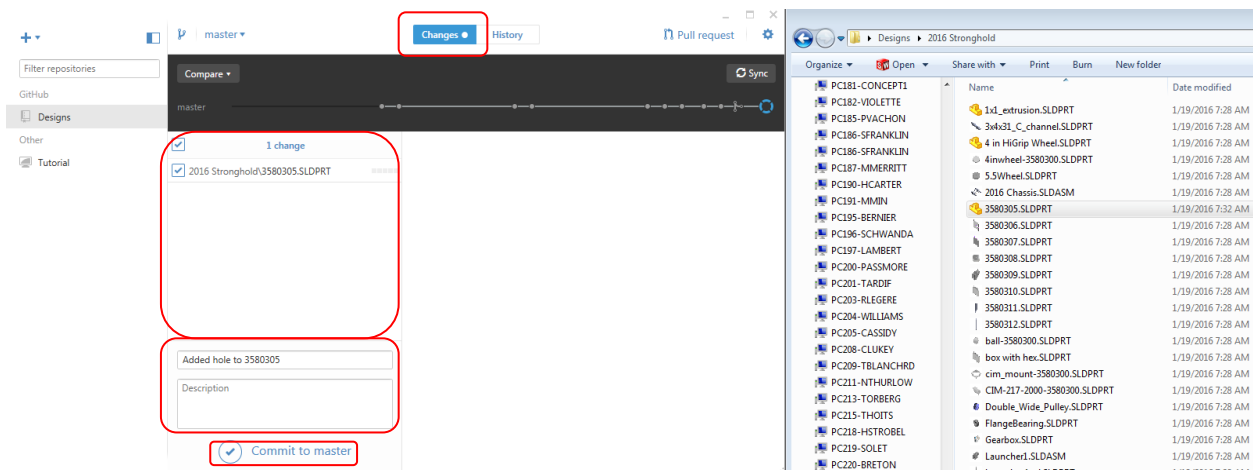

Before working on the design select “sync” in the git hub desktop app to get the latest files to sync with the local folder.

After you have completed some work or want to share your changes with a team member save all your files and close them in SolidWorks.

Open the github desktop app and go to changes, you will see a list of parts you have modified

Add a summary of changes and a description if you want to, then select commit to master.

Other users will then have to select “sync” in gitHub desktop to download and close and reopen assemblies or parts in Works to use your changes
